Summary

Software Engineer with 3+ years of experience in software development, application design, maintenance, and performance optimization. Experienced in building and deploying web and cross-platform mobile applications using React Native and Angular, with hands-on experience in Java, RESTful APIs, Kafka, state management with Redux and modular software design. Strong understanding of reusable components, clean and maintainable code, application integration, and troubleshooting.

Experience

Software Developer, Sify Technologies – Chennai, Tamil Nadu July 2023 – Present

- Developed and delivered React Native mobile applications from scratch, handling the entire lifecycle from design to deployment. Implemented **Redux** for state management to store user sessions and theme data, reducing redundant API calls and improving app performance by **25%**.
- Implemented background location fetching using **Native Modules** instead of third-party libraries, resulting in a **91%** improvement in application efficiency.
- Led the configuration and setup of the **iOS** application in Xcode, guaranteeing seamless integration and high performance; Delivered the application on the Apple App Store, managing provisioning profiles, certificates and App Store Connect.
- Developed backend components using Java 17, gaining hands-on experience in core Java, multithreading, concurrent processing, exception handling, logging, and Maven-based application development.
- Developed an event-driven incremental discovery system using Java, Apache Kafka, and Redis to process high-volume configuration-change events, implementing manual Kafka offset management, event preprocessing, JSON deserialization, worker-based processing, and Redis-based device state and ZSET scheduling.
- Implemented discovery window and dispatcher logic to calculate device discovery timings, manage device states and concurrent executions, and trigger Nautobot-based network discovery APIs using device IPs as the discovery input.

Education

Velammal Engineering College, BE in Computer Science and Engineering 2019 – 2023

- CGPA: 8.75/10

Projects

Ennisai – Personalized Music Player

Tech Stack: React Native, TypeScript, React-Redux, PostgreSQL, Firebase, NodeJS.

- Developing a personalized **music player application** with features for marking favorite song lines and creating a customized listening experience.
- Building **premium remix capabilities** that enable users to create personalized versions of tracks from selected artists and albums.

Hand Gesture Recognition

TechStack: Python, Javascript, HTML, CSS.

- Gesture detection to help identify common ASL gestures as well as alphabets, translating them into sentences. Developed and fine-tuned an **LSTM** model, outperforming traditional RNNs in handling sequential data; increased processing speed by 30%, allowing the data science team to generate insights more rapidly.

Technical Skills

Programming Languages & Frameworks: JavaScript, TypeScript, Java, HTML, CSS, React, React Native, Angular

Tools: Xcode, Android Studio, Git, Docker

Databases: MySQL, PostgreSQL, Neo4j

Operating Systems: Linux(Ubuntu), Windows, MacOS

Certifications

- **AWS Certified Developer – Associate** Amazon Web Services (AWS) Completed on 13 May 2023
- **Google Data Analytics Certification** Google Completed on 15 Oct 2022
